Linkedin: <https://www.linkedin.com/in/muhammed-talha-yayla/>

Gender: Male | **Date of Birth:** 15/03/2001 | **Nationality:** Turkish

Education

Istanbul University

Graduation Date : July 2, 2025

Istanbul University – Computer Programming (2022 – Present)

42 Software School – Software Engineering (2022 – 2025)

Experience

AISOFT

Sakarya, Turkey

AI & Data Scientist (Intern)

(Jan – May 2025)

AI & Computer Engineer

(May 2025 - Now)

- Focused on AI model development and data preprocessing.
- Contributed to the **TÜBİTAK 1711 - Artificial Intelligence Ecosystem Call** project, working on micro-level defect **segmentation** using deep learning models. Large scale computer vision projects for TOFAS A.Ş.
- Developed and optimized AI models for object segmentation and anomaly detection in high-precision manufacturing.
- Implemented and fine-tuned machine learning pipelines to enhance model accuracy and efficiency.
- Developed AI-powered computer vision systems for industrial quality control.
- Implemented ECE R-43 compliant CCR fragmentation analysis system for Fercam (Bursa), reducing manual 15-minute testing to 1.38 minutes.
- Integrated CCR for Uğurlu Auto Glass (Denizli) production lines.
- Built thermal anomaly detection system for Eren Holding coal fleets using thermal imaging.
- Designed modular container infrastructure, monitoring, logging, and automated e-mail alerting.
- Created internal error-handling frameworks and coding standards.

Google Artificial Intelligence and Technology Academy

(2023 - 2024)

École 42 — Core Projects

(2022 – Present)

- Libft, Get Next Line, Ft_printf, MiniShell, Philosophers, Born2beroot, Push_swap
- So_long, Cub3D, NetPractice, Inception, C++ Modules

Software & IoT Developer

(2018 – Present)

- Built embedded systems, IoT solutions, and automation modules.
- Delivered custom software for multiple industries.
- Served as assistant evaluator in TEKNOFEST Electric Vehicle category.

Projects

TEKNOFEST Electric Vehicle (Assistant Evaluator, 2024)

- Served as an assistant evaluator in the Electric Vehicle category, contributing to technical inspection, performance assessment, and compliance checks during the competition.
- Supported evaluation teams by reviewing project documentation, verifying engineering criteria, and assisting with on-site technical evaluations.
- Ensured fair scoring and adherence to competition rules, improving the accuracy and consistency of the evaluation process.

AISOFT CCR – Automated Glass Fragmentation Analysis System

- Built an AI-powered system for automated ECE R-43 compliant glass fragmentation analysis and reporting.
- Implemented 5×5 cm particle counting, largest-fragment measurement, and statistical reporting to support quality control.
- Reduced manual inspection time from 15 minutes to **1.38 minutes** through automated imaging and end-to-end reporting

Thermal Anomaly Detection System (Eren Holding)

- Designed and deployed an AI-based thermal imaging solution for anomaly detection in coal fleet operations.
- Built complete backend infrastructure including real-time thermal data processing, alert automation, and monitoring.
- Improved operational safety by enabling instant detection and notification of abnormal temperature patterns.

Modular Container Infrastructure – Deployment, Monitoring & Logging

- Architected a modular containerized infrastructure used across all AISOFT projects for reliable deployment and scaling.
- Developed centralized logging, monitoring, and automated emergency notification systems.
- Standardized company-wide development through reusable templates, error-handling frameworks, and coding guidelines.

IoT & Embedded Systems – Real-Time Automation Solutions

- Developed embedded systems featuring real-time sensor integration, hardware-software interaction, and automation.
- Built custom firmware and software pipelines tailored to industrial and client-specific needs.
- Delivered fully integrated IoT solutions combining sensing, communication, and data processing.

Personal IoT & Home Automation Projects

- Developed a full home automation system using Raspberry Pi, including device control, monitoring, and local server integration.
- Built a custom VPN infrastructure to securely access all home devices remotely.
- Designed smart lighting modules using ESP32 with real-time control and automation features.

Skills & Interests

Technical:

- Programming: C (Senior), C++ (Mid), Python (Mid), C#, Shell Script
- Machine Learning: TensorFlow, PyTorch, Hugging Face Transformers, Computer Vision, Deep Learning, Model Deployment
- Data Tools: Apache Spark, Apache NiFi, Docker
- DevOps Tools: Docker, Linux, Monitoring Systems
- Databases: PostgreSQL, Oracle Database, MSSQL, Neo4j Aura DB, Firebase

Certificates:

- **Google Generative AI Learning Path Program**
 - Specialized in Generative AI (Vertex AI Studio, Transformer, BERT) with hands-on experience in text generation and captioning.
- **Google Project Management Certification**
 - Practical experience in project initiation, planning, execution, Agile methodologies, and end-to-end project delivery (6-month specialization).
- **Machine Learning with Python – Prof. Sadi Evren Şeker**
 - Strong foundation in ML concepts and real-world Python implementations.
- CISCO CCNA 1 – Introduction to Networks
- Unity Game Development Certificate
- Object-Oriented Programming in C++ / C#
- SQL Certification
- English for Developers – Google
- Google OUA Graduation Certificate
- BTK Academy – C Programming Certificate
- Game Jam Participation
- Diction & Presentation Skills Training

Language: English B1

Interests: Artificial Intelligence, Community Building, Camping, Motorbike Adventure & Rally, Outdoor Sports, Travel
